

Spitting Cobra

by Dennis Lange

The spitting cobra in Africa can spray venom accurately up to 12 feet to blind its adversary. The venom is pushed out of glands by muscle contractions. Air forces it out through two holes in the snake's fangs. The muscles, the venom, the glands, the push of air, the two holes positioned correctly, and it all working in unison perfectly shows God's creation, not stupid chance. Imagine a spitting cobra fashioned by trial and error: It spits, but spits a non-blinding fluid through two holes that go

off at strange angles!

Acts 4:24 O' Lord, it is Thou who didst make the heaven and the earth and the sea, and all that is in them.
